DETAILED ACTION

- 1. The following is an examiner's statement of reasons for allowance:**

The invention relates to a process of reducing core set and/or post process curl in an imaging element in which the support layer comprises a biaxially stretched, semi-crystalline film base of a PET based polyester material comprising one or more polyester resins, in which material the total level of repeat units derived CHDM 65-100 mole percent, based on total glycol component in the material, the process comprising annealing the support at a temperature between 60°C and T_g +15°C for a time less than 6 minutes wherein T_g is the glass transition temperature of the unprocessed amorphous polyester material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 1732

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schrader et al and Greener et al., both teach methods of reducing core set curling but do not teach the particular support layer composition nor the annealing within the specified temperature range as claimed in the instant invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J. Lechert Jr. whose telephone number is 571-272-1203. The examiner can normally be reached on 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael P. Colaianni can be reached on 571-272-1196. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
